Mariposa County, CA
Dashboard Summary of Findings
2018
The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. The NCS captures residents’ opinions within the three pillars of a community (Community Characteristics, Governance and Participation) across eight central facets of community (Safety, Mobility, Natural Environment, Built Environment, Economy, Recreation and Wellness, Education and Enrichment and Community Engagement). This report summarizes Mariposa County’s performance in the eight facets of community livability with the “General” rating as a summary of results from the overarching questions not shown within any of the eight facets. The “Overall” represents the community pillar in its entirety (the eight facets and general).

By summarizing resident ratings across the eight facets and three pillars of a livable community, a picture of Mariposa County’s community livability emerges. Below, the color of each community facet summarizes how residents rated each of the pillars that support it – Community Characteristics, Governance and Participation. When most ratings were higher than the benchmark, the color is the darkest shade; when most ratings were lower than the benchmark, the color is the lightest shade. A mix of ratings (higher and lower than the benchmark) results in a color between the extremes.

Broadly, ratings across most facets of Community Characteristics and Governance tended to be positive and similar to the national benchmarks. However, ratings within Built Environment and Recreation and Wellness tended to be lower than the benchmark in both pillars and ratings for Economy tended to be lower than the benchmark within Governance. Most reported rates of Participation tended to be similar to those in comparison communities, while rates of Participation within Natural Environment tended to be higher than rates observed elsewhere. This information can be helpful in identifying the areas that merit more attention.
